

January 28, 2009

We are asking that all testing activity against the new CSIONet.com TELUS infrastructure now be placed on hold. TELUS has identified a complex fix required to the infrastructure, in order to address the existing known problems. We anticipate testing to resume early next week. Any previously reported issues will be re-examined by Telus in the upgraded environment.

Listening to the concerns of our members, we have been able to add two resources to our project team to assist in the testing and implementation phases. Beginning this week, will begin scheduling discussions with our testing members to share our complete test plan and gather information regarding individual test issues and concerns, and integrate those issues into the overall plan moving forward.
